TOKEN + TREASURY / FINALIZED RECEIPT

Created. Verified. Disclosed.

Actual launch: 31 October 2026, 16:11:25 CDMX / 22:11:25 UTC.

Official Solana mint

BCPe7sWqEh9bT5eUiFZKWqzWLToR1cr6g7ikwjazpump

1 billion NOAH

6 decimals. Mint and freeze authorities are null. Token-2022. Pump.fun.

Founder initial acquisition. 84,603,487.442939 NOAH, representing 8.4603487442939% of total supply. Creation and BuyV2 are in the same finalized transaction. This is an initial receipt, not a live balance or a complete audit of controlled wallets.

Actual cost. Selected purchase input: 2.6 SOL. Net wallet debit: 2.607917847 SOL, including purchase and account/network costs. The transaction network fee is 0.000033688 SOL; the remaining difference is not classified wholly as a trading fee.

Verified creator wallet

BN94ha4vwze1rcFSxPgLKozoA4WhFNY74tLvwgcNSAoZ

Treasury policy. 100% of creator fees actually received by NOAH is allocated to project treasury, with a public use ledger. This policy is not an automatic transfer setup or evidence of reconciled fee receipts. Curve purchases and market cap are not automatically development cash.

Locks and other allocations. No project token lock or funded treasury/community token reserve is verified by this edition. Other controlled wallets and the opening treasury balance remain to be reconciled.

Product and token rights. Public Scout research and local saving remain free, without account or wallet. Holder benefits remain proposals. The token provides no equity or trading-engine profit entitlement. Genesis and airdrop terms remain separate.

Development plan. US$60k initial target, included in a US$240k base plan. Priority: engineering, data, security and user validation. These are estimates, not capital received or automatic spending approval.

Verify the finalized creation receipt | Machine-readable token record

Identity and initial acquisition are verified, not safety or future returns. Token value can fall to zero. No profitable predictive alpha has been established.
